

Series VII Lube Oil System

Enhance Performance & Extend Equipment Life

The Series VII Lube Oil System is specifically designed as an auxiliary lube oil system module to provide continuous lubrication for turbomachinery in critical applications. With a standardized design, this versatile system can also be customized with options based on your specific requirements. The results? A system designed for your needs while vastly increasing bearing and shaft life resulting in reduced maintenance and superior unit reliability.

INFORMATION ONLY!

Benefits

- Compact, self contained unit makes installation a breeze.
- Tailored to suit various applications seamlessly.
- Keep temperatures in check with our standard, water cooled, heat exchanger.
- Ensure smooth operation and efficient lubrication.

Features

- Pre-engineered options to meet your precise specifications.
- Compatible with a wide range of turbines and rotating equipment.
- Dual filter arrangement to transfer 'on the fly'.
- Stainless steel components ensure durability for long-lasting performance.
